### 3 4 Digital weighing platforms KDP

Kern & Sohn

Universal weighing platforms for flexible connection into process chains. All recorded values can be transferred to the system as digital data using the available interfaces and processed further.

Searching and remote control of the balance using external control devices or computers with the KERN Communication Protocol (KCP). KCP is a standardised interface command structure for KERN balances and other instruments which allows you to recall and manage all relevant parameters and device functions. You can therefore simply connect KERN devices with KCP to computers, industrial control systems and other digital systems. In a large number of cases the KCP is compatible with the MT-SICS protocol. DAkkS calibration certificate optionally available.

### 3 Balance bench with granite slab

Constructed to absorb vibrations and oscillations, which would otherwise distort the weighing result. With a granite slab positioned on absorbing rubber components as surface for placing the analytical balance. The work surface surrounds the slab and offers many storage options. The sturdy aluminium frame has four height-adjustable feet, which can be used to accurately level the balance bench on an uneven floor. The inlet on front of the table offers the possibility to work at the bench in an ergonomic standing or seated position without touching the table. All surfaces are easy and hygienic to clean.

#### Temperature indicators WarmMark™

Self-adhesive indicators to monitor temperature exceedance and duration, e.g. when transporting temperature-sensitive goods. The indicator reliably indicates whether the temperatures were above the selected temperature limit by red dots. In addition, the indicator provides information on the duration of the temperature exceedance (the time is based on a constant temperature overrun of 2 °C above the limit value of the indicator).

#### 1 Measuring instrument for viscosity analysis ViscoClock plus

SI Analytics

The ViscoClock plus is an electronic timing unit for glass capillary viscometers used to determine kinematic and relative viscosity. Succeeding the well-proven ViscoClock, the new instrument features data storage and simpler handling. The ViscoClock plus is designed for SI Analytics Ubbelohde (DIN; ASTM; Micro) and Micro Ostwald viscometers. To determine absolute kinematic viscosities, viscometers have to be used which are calibrated for automatic measurements. The ViscoClock plus automatically measures the flow time of temperature-stabilized liquids in capillary viscometers by means of infrared light barriers. The viscometer including a sample is inserted into the ViscoClock plus and immersed into a thermostatic bath for temperature stabilization. After thermostating, the sample is pumped into the measuring bulb, and the flow time is detected automatically. The large display enables easy read-off of flow times and additional information: date, time, sample ID and viscometer ID. The ViscoClock plus can be used in all SI Analytics bath types.

**ViscoClock plus:** Electronic timing unit for glass capillary viscometers, power supply 100-230 V and manual pump.

**ViscoClock plus M1:** Device incl. thermostatic bath for temperatures from +10 to +60 °C

**ViscoClock plus M2:** Device incl. thermostatic bath for temperatures from -40 to +150 °C

**NEW**

SI Analytics

For tempering of samples in a viscometer, as an alternative to a special glass-panelled bath thermostat. ViscoClock plus has to be connected via hoses to a suitable thermostat bath circulator. For safety reasons, the range of measuring temperatures is restricted to ±15 °C compared to room temperature. The use of an additional magnetic stirrer is recommended.

### 1 2 Melting point apparatus, Electrothermal IA 9100/9200/9300

The updated and improved IA9000 Series Digital Melting Point Apparatus offers an easy way to measure the melting points of up to 3 samples simultaneously without sacrificing accuracy; the temperature resolution is within 0.1 °C. The starting temperature of the approximate melting range can easily be input via the membrane keypad using the simple intuitive menus. The unit quickly heats up to this temperature and gives an optical and acoustic signal once it has been reached. When the operator then presses another key, the device begins to heat up at a constant rate (IA 9100 fixed at 1 °C/min., IA 9200 and IA 9300 adjustable between 0.2 to 10 °C/min. in increments of 0.1 °C).

*Electrothermal*

Up to 4 melting points (IA 9300 up to 6 melting points) can be recorded and transferred to the memory as discreet temperatures for later recall on the display. Model IA 9200/9300 provides the opportunity for computer-supported data analysis. An accessory printer enables documentation of the results, date, time (real time) and sample number.

- Ergonomic design ideal for multiple users.
- Height-adjustable extension arm and a viewing head that may be rotated to suit each user.
- The viewing head holds a viewing magnifier that offers 8X magnification.
- The extension arm is completely collapsible and can be neatly folded away into the unit, so that the unit can be stored flat to save space.
- Each IA9000 series model comes supplied with a pack of 50 capillary tubes.

### 1 Automatic Melting Point Apparatus, SMP50

Accurately and reliably determining the melting point of up to three samples simultaneously. *Stuart*  
 The SMP50 has a custom designed user interface based on an established Android platform for intuitive setup and navigation. All operation is via the 7" colour touchscreen. Once programmed, users can leave the SMP50 to complete the melt analysis independently, alternatively the melt can also be observed on the screen live or post melt. During post melt review additional measurement tags can be added if required, such as meniscus point or the automatically obtained result can be overwritten.

A generous 8 GB on board storage is included, which should comfortably hold approximately 300 melts files including videos. Results can also be transferred via USB stick on to PC or can be printed directly from the unit via the accessory printer.

The SMP50 features a useful storage drawer to house all standard capillary tubes.

All units are factory supplied with a calibration certificate showing individual serial number for traceability. The SMP50 also conforms to Pharmacopeia and GLP.
